

# Legacy Roofing & Waterproofing

## Overview

Legacy Roofing & Waterproofing ("Legacy") is a roofing company in San Jose and Salinas, California. Their website's sole purpose is to showcase the work that they have done and provide a way to contact the company for possible service work. For the capstone project, we are redesigning their website with a modern aesthetic and providing the user with a sensible user interaction. The main goal is to give Legacy a simple and clean look with easier navigation.

Designer: Athena Winslow  
Advisors: Amir Attia, Kevin Kahill

## Problem

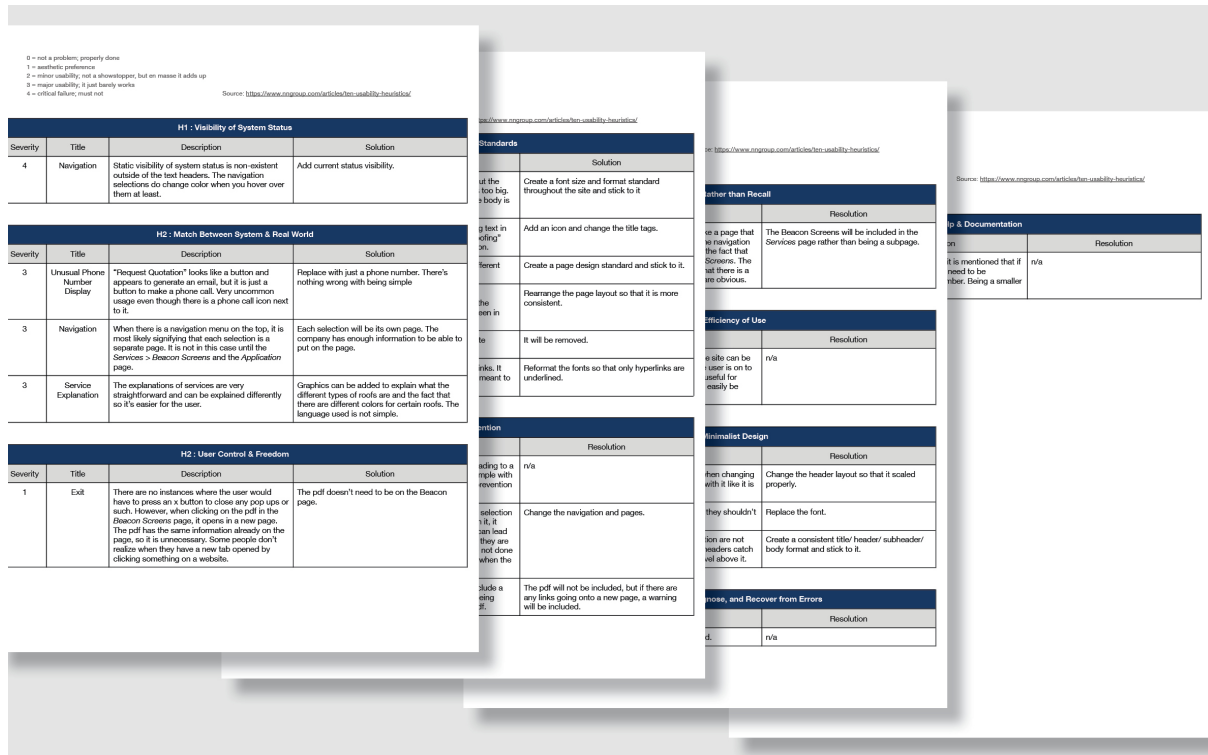

The current website does not have consistent layouts or adequate accessibility. The font appearance, design theme, and color choice prevents the site from looking professional.

## Solution

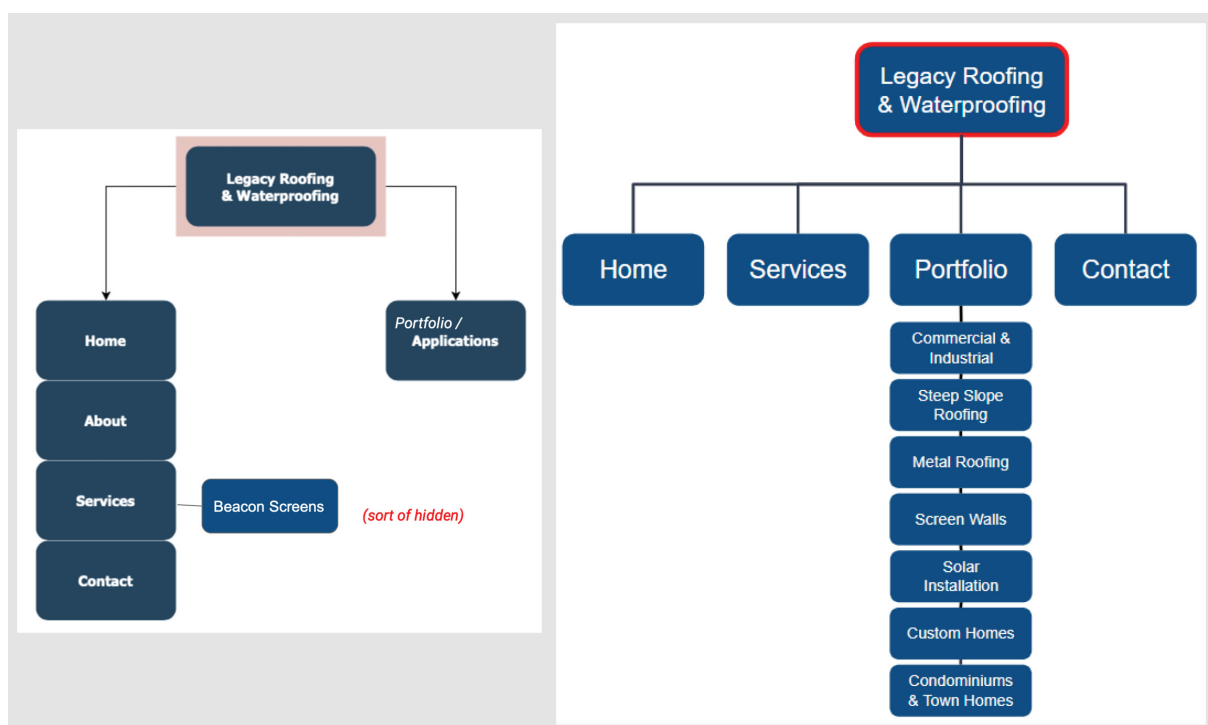

Creating a website that is simple and clean, presenting only the pertinent information. Making the site responsive on mobile devices as well.

## Methodology

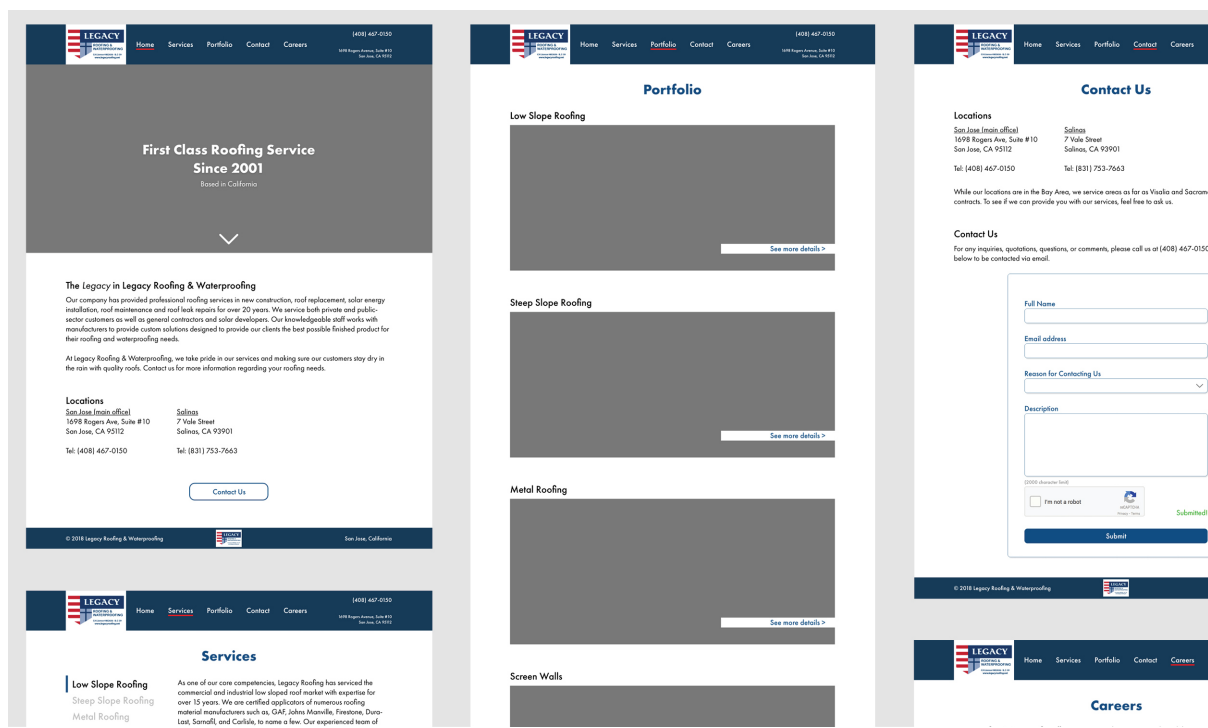

### Heuristic Evaluation

### Site Maps (old/new)

### Wireframes

### High Fidelity Prototype

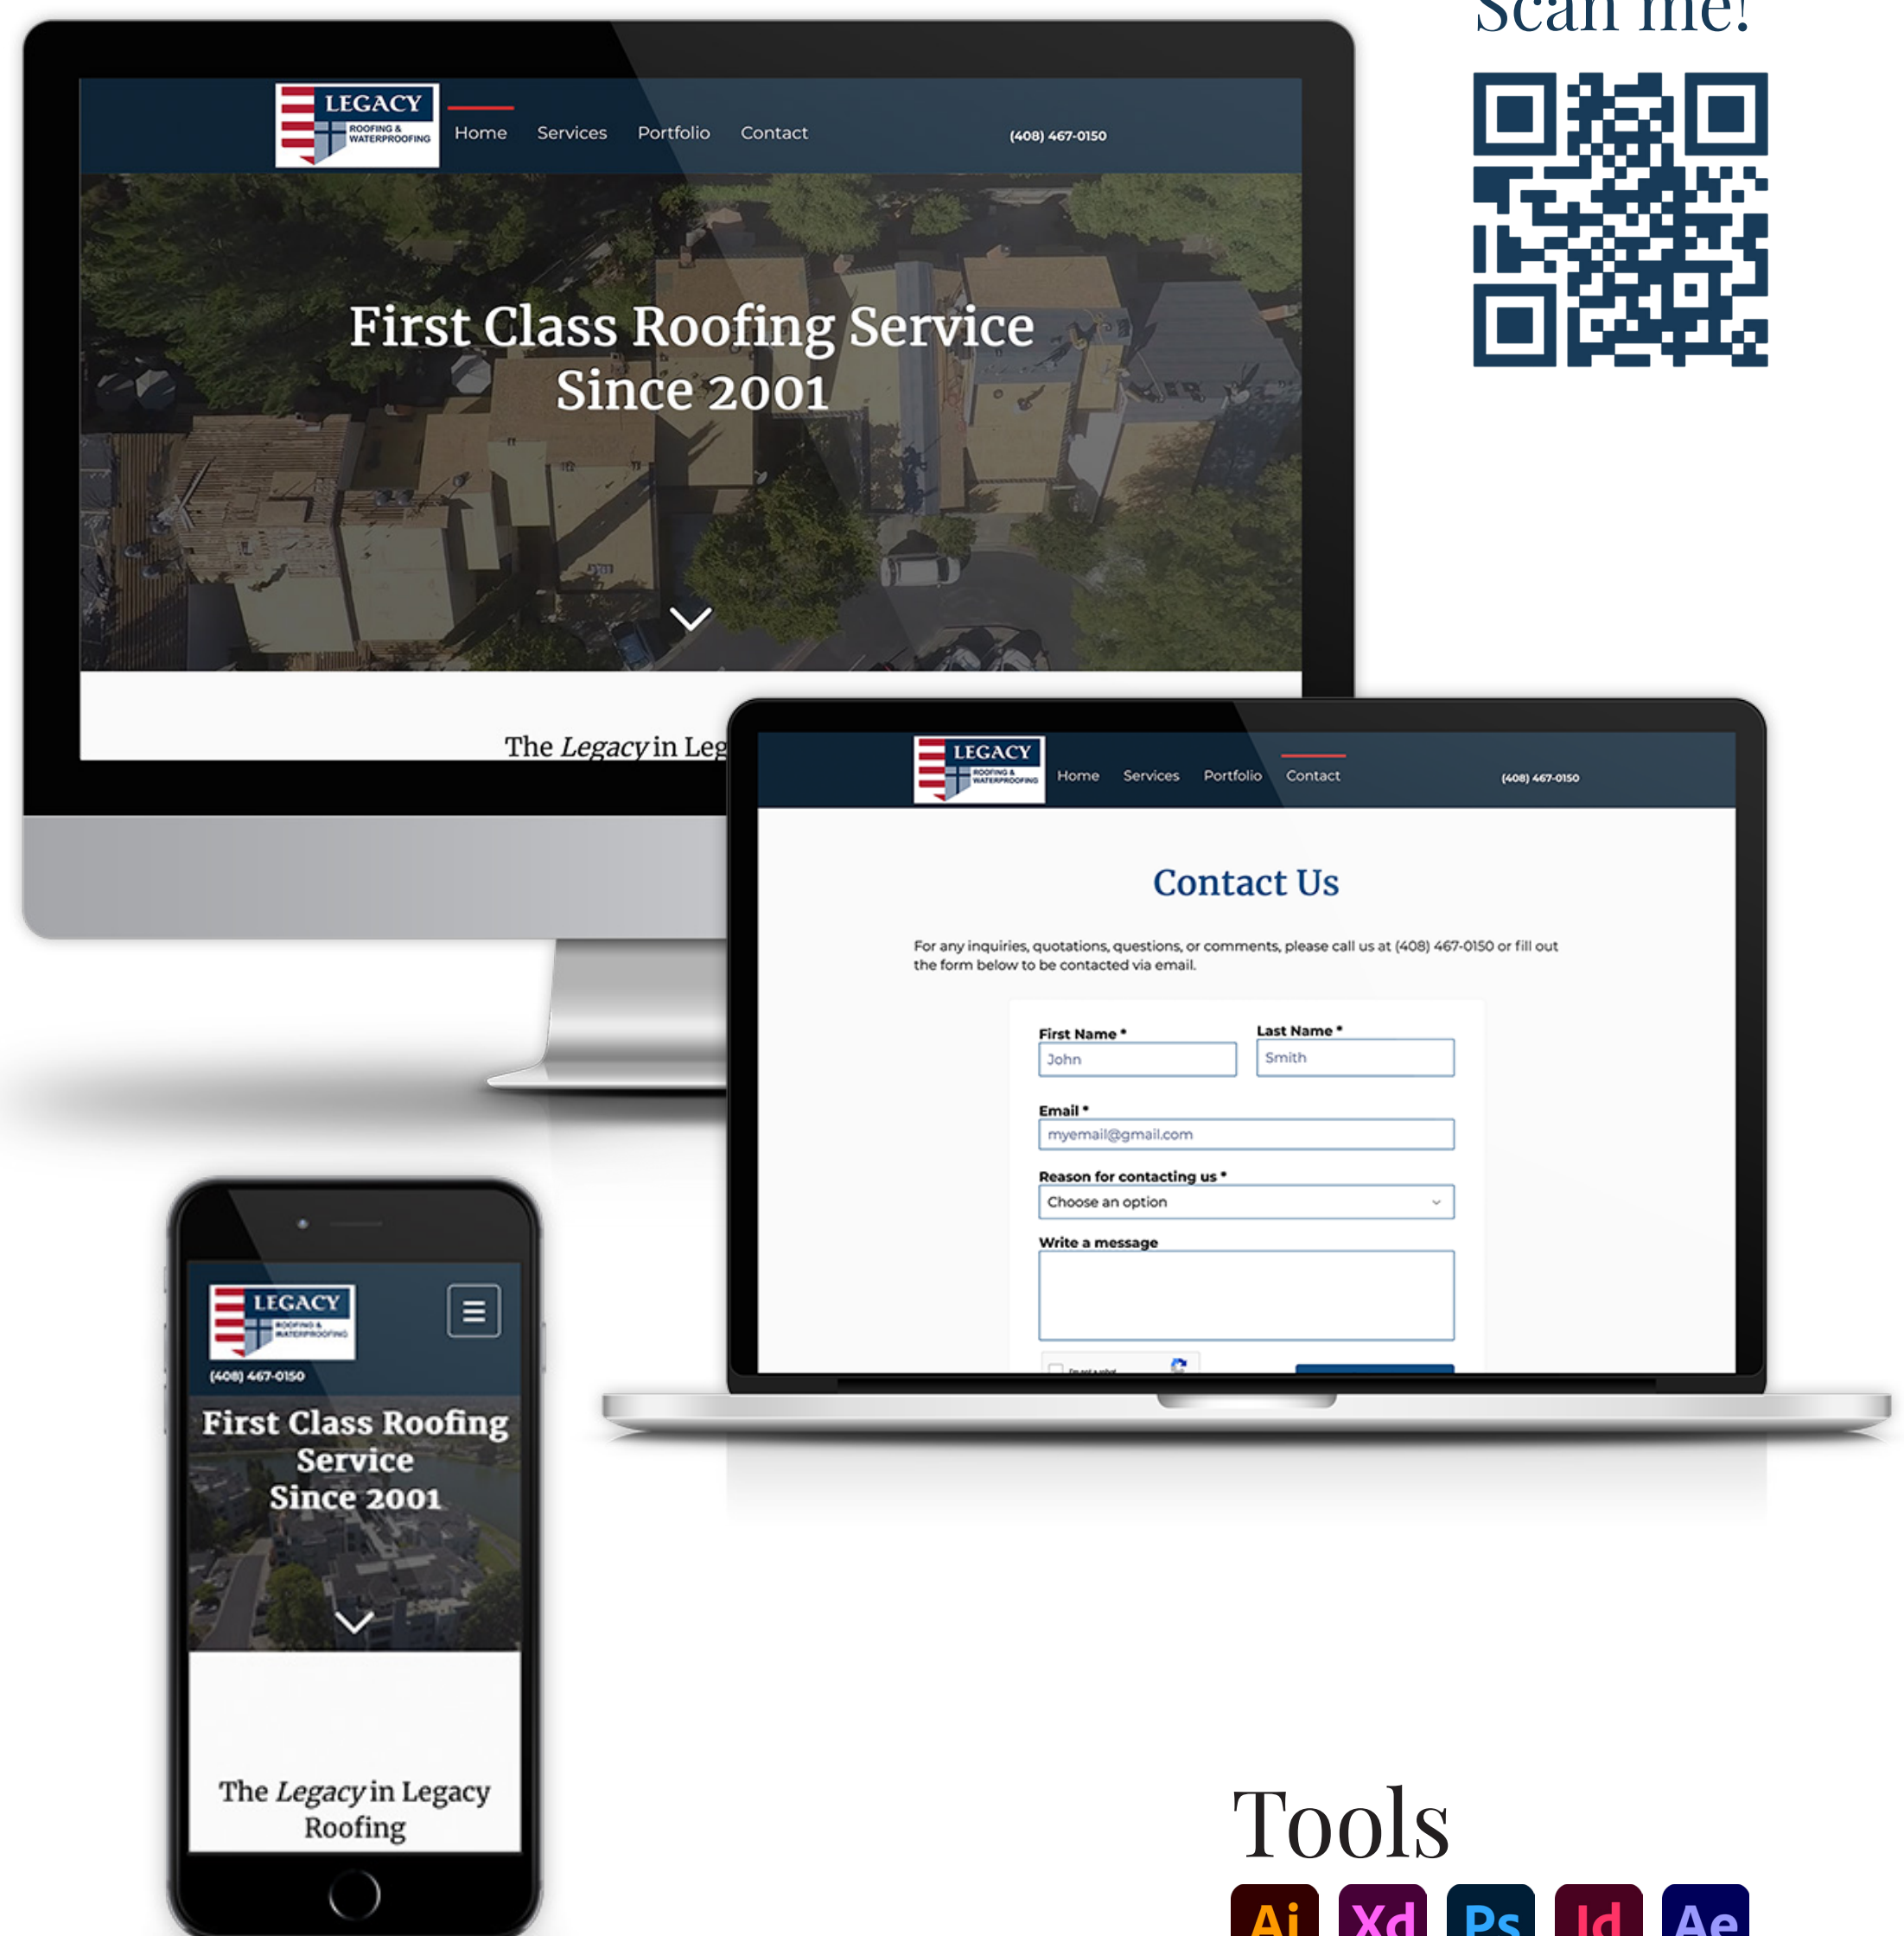

## Challenges

The biggest challenge was communication. I was doing this capstone during the company's busiest part of the year. Another challenge was that Legacy wasn't great about gathering photographs of their work.

## Next Steps

Our next steps for this project is to collect more images to be able to showcase on the site and to add more details to the image descriptions. Having more images on their site would create a great variability of projects showing their exceptional work.
